

HOW TO APPLY WHITEBOARD PAINT

Make sure you read all of the instructions carefully before you start to apply this product.

You only have one hour to apply Whiteboard Paint, once opened and mixed, so you need to ensure you are ready to apply first. We supply gloves with this kit, and we also recommend you wear eye protection.

1

MEASURE WHERE YOU ARE PAINTING

- Measure the area to make sure you have enough paint.
- Do not apply the paint to a bigger area than recommended as this will stretch the paint and the product will not work.

2

PREPARE THE SURFACE

- Apply 2 coats (3 coats for fresh plaster) of white primer before our Whiteboard Paint. We recommend using our primer, as ordinary emulsion and latex paints are not suitable as a primer.

3

APPLYING THE PRIMER

- Use any roller or brush to apply our primer.
- The surface must be clean and dry before you apply the primer.
- Stir primer thoroughly before use.
- The primer takes 2-4 hours between coats and 12 hours after the final coat has been applied.

4

APPLICATION EQUIPMENT

- Whiteboard Paint must be applied with a new roller (provided in the kit), brush and tray. Any contact with water or solvent will cause a reaction with our Whiteboard Paint affecting its performance.
- You can use a larger rollers, but we recommend a high quality foam or mohair roller. If you are using a mohair roller, remove all loose fibres before use.

5

MIX AND STIR

- Pour Part 2's into Part 1.
- It is important to stir thoroughly for no less than five minutes using the stirring stick in your kit.
- Apply within one hour of mixing, using the roller sleeve in your kit.
- Once mixed, the paint must be applied in one hour (high temperatures will reduce this time).

6**APPLY WHITEBOARD PAINT**

- Whiteboard Paint must be applied in 1 metre sections.
- Paint around the edges of the first 1 metre section with a new brush.
- With the new roller, apply our Whiteboard Paint to this 1 metre section.
- Pass the roller over the entire surface 10 times to ensure a generous, smooth and even coating.
- Upon completion of each one metre section, examine the painted surface from three angles for any imperfections, missed spots or areas of uneven application. Apply more Whiteboard Paint as required.
- You must ensure each metre section has adequate Whiteboard Paint to create a writing surface, before moving on to the next one metre section.
- Once the first one metre section is complete and has been inspected, move to the second section and repeat.

7**DRYING TIME**

- Please note the 'Ready to Use' date (four days from application) when users will be able to start writing on and wiping off their new surface. Make sure to clean the surface daily until day seven.
- Whiteboard Paint will be touch dry after five hours.
- Whiteboard Paint will be a whiteboard surface after four days.
- The performance (erasability) of Whiteboard Paint will continue to improve over the first 30 days.
